

Apprenticeship: Electronics technician for devices and systems (m/f/d/a)

As an electronics technician for devices and systems at EPSa, you will manufacture, assemble, and maintain assemblies, modules, and devices for our customers in the healthcare, e-mobility, cleantech, industrial electronics, and other industries. During your apprenticeship, you will gain specialized knowledge in the highly innovative field of electronics and learn to implement customer requirements directly in the product.

The training program to become an electronics technician lasts 3.5 years and begins at the start of the school year in Thuringia. You will complete your school-based training at the state vocational training center Arnstadt/Ilmenau, located in Ilmenau.

You need:

- A good secondary school diploma or high school diploma
- Interest in science subjects, particularly physics and mathematics
- An aptitude for technical concepts
- Proficiency with computers and modern software
- Good command of German; English skills with room for improvement
- Motivation, drive, creativity, and team spirit; a sense of responsibility, reliability, and perseverance

This makes us the ideal employer:

- Over 30 years of experience in electronics manufacturing
- A company committed to training
- Good transportation access, free parking
- High retention rate
