

Dual Bachelor's program in Business Informatics

During your dual bachelor's degree program in Business Informatics, you'll gain valuable skills in business administration and computer science.

You'll delve deeply into topics such as information systems, software development, and computer engineering. In business administration, you'll cover not only the basics but also specialized areas like industry and consulting.

You'll also gain insights into business mathematics, mathematical logic, statistics, and operations research.

And the best part? You'll learn how to conduct scientific research and pick up a foreign language along the way.

After successfully completing the program, you'll be responsible for IT projects, software development, and system management. You'll also serve as an expert in areas such as databases and networks and act as a liaison between IT and all other departments.

You need:

- Interest in the automated processing of information using computers
- Understanding of business and technical matters
- Analytical thinking skills
- Good knowledge of German; English skills that can be developed
- Motivation, drive, creativity, and team spirit
- Reliability, a sense of responsibility, and perseverance
- Proficiency with computers and modern software
