

Dual Bachelor's program in Engineering, specialising in Production Engineering

Production Engineering is a classic engineering program, particularly in the fields of mechanical and electrical engineering as well as in other manufacturing industries.

During the program, you will learn to plan and manage production technologies and business processes. The program combines foundational knowledge in mathematics and the natural sciences with topics such as materials science, manufacturing technology, and production planning.

You will also learn how to use computer-aided engineering (CAE). Business administration courses ensure that you gain a solid understanding of a company's structures and processes and develop a sense of costs and markets.

During the practical phases, you can work directly on exciting development and optimization projects and put your knowledge into practice.

English and some content from computer science, as well as organizational and management techniques, round out the program.

You need:

- Interest in science subjects, particularly physics and mathematics
- An aptitude for technical concepts
- Proficiency in using computers and modern software
- Good knowledge of German; English skills with room for improvement
- Motivation, drive, creativity, and team spirit
- Sense of responsibility, reliability, and perseverance
