

## Dual Bachelor's Degree Program in Engineering Field of Study: Technical Management

Technical Management serves as the interface between engineering and operations in our company and provides a crucial foundation for all other technical processes.

The dual bachelor's program in this field is tailored precisely to these requirements and equips you with a solid foundation in mathematics and the natural sciences, as well as the fundamentals of mechanical and manufacturing engineering.

You will also learn how to work with computer-aided engineering (CAE).

During the practical phases, you will be directly introduced to our company's manufacturing processes and project management. Business administration courses, organizational and management techniques, computer science, and foreign languages round out your studies.

Thanks to your practical skills and social competencies, you will quickly be ready to serve as a future specialist or manager in our team.

### You need:

- Interest in science subjects, particularly physics and mathematics
- An aptitude for technical concepts
- Proficiency in using computers and modern software
- Good knowledge of German; English skills that can be developed
- Motivation, a drive to succeed, creativity, and team spirit
- A sense of responsibility, reliability, and perseverance
